Full Stack Developer Assessment

Redesign the Ethixweb website, India-specific. Full stack. 24 hours.

ROLE	TIME LIMIT	AI TOOLS	SCOPE
Full Stack Developer	24 hours	Allowed	Frontend + backend

The brief

Redesign the Ethixweb website, India-specific. Study our current site at **ethixweb.com**, then reimagine it as a version built for India: Indian businesses, Indian audiences and an Indian look and feel, while staying premium and world-class. How you make it India-specific is up to you. That thinking is the test. **This is a full stack task:** the frontend must look premium, and every part that needs a backend must actually work.

What to build

1. Home page

Hero with a clear value proposition, services, our process, featured work, why Ethixweb and a strong call to action.

2. Inner pages

Services, About (tell our India story) and Contact. Consistent design system across every page.

3. Backend (required)

Working enquiry form that saves leads to a database (Supabase, Firebase, MongoDB or PostgreSQL), with validation and spam protection. A protected **/admin** page to view and manage leads.

4. Design rationale

A short section in your README: what makes it India-specific, why you chose it, and what you improved over our current site.

Frontend: must look premium

- Polished UI with the Ethixweb logo and red brand
- Fully responsive, mobile first
- Smooth motion and micro-interactions
- **PageSpeed Insights 90+** on mobile and desktop
- No lorem ipsum, broken links or console errors

Backend: must actually work

- Every feature that needs a backend is fully working
- Leads saved in a real database, nothing hardcoded
- Validation, spam protection, secure /admin login
- Secrets in environment variables, never in GitHub
- Clean API structure and proper error handling

How you will be judged

30%	20%	20%	20%	10%
Design and India fit	UI and UX	Backend and code	PageSpeed Insights	Detail and polish

HOW TO SUBMIT

Submit within **24 hours** of receiving this brief at tally.so/r/KY7Ao8. Late submissions are not reviewed.

Include: **1)** Live URL (Vercel or Netlify) **2)** Public GitHub repo **3)** README with tech stack and your design rationale **4)** PageSpeed Insights screenshots (mobile and desktop) **5)** Demo admin login **6)** Bonus: a 1 to 2 minute walkthrough video.

Any stack is fine (Next.js, Astro or React with Tailwind preferred). AI tools are welcome, but you must explain every design and code choice in the interview.

Confidential. For assessment use only.
